# A Complete Solution for Rear Ramp Maintenance

The ARRP uses multiple cushioning pads to support the weight of the ramp reducing imposed loads. Easy to setup and maintain giving many years of operation.

- Simple Operation
- Wireless remote
- Setup can be achieved in seconds
- Supports the ramp in 10 locations - configured to match the strong points of the aircraft
- 24V DC Powered with on-board 110V AC Battery Charger
- Minimal maintenance
- Slow powered raise speed - 1 inch per second
- Over 48 hours of operation on one battery charge
- Urethane support pads reduce load on aircraft
- Fitted with Swivel casters and towing ring for transport - 10mph towing speed
- 24/7 technical support
- One year full warranty
